Research Experience

Sept 2021 – Sept 2025   🔖 **PhD Researcher**, *Trinity College Dublin*

- Atmospheric characterisation of exoplanets using high-resolution emission spectroscopy.

- Applied advanced Bayesian inference techniques to constrain atmospheric composition, T-P profiles, and dynamics of ultra-hot Jupiters.

- Analysed day-side atmospheres across different phase sequences with VLT/CRIRES+ to investigate variations in atmospheric properties as the planet rotates.

Mar 2020 – Sep 2020   🔖 **Master's Research Project**, *University College London (UCL)*

- Studied the non-axisymmetric bar of the Milky Way and performed simulations using an orbit integrator (written in C++).

- Investigated the behaviour of x_2 orbits and their interactions with the bar.

- Explored the behaviour of orbital resonances and x_2 orbits when introducing a nuclear disk.

Feb 2019 – May 2019   🔖 **Undergraduate Research Project**, *Amrita Vishwa Vidyapeetham*

- Investigated the basic properties of Solar and Interstellar Plasma.

- The simulation output was investigated in Python to determine the plasma parameters (such as Debye length and Debye number) as a function of temperature. These results were then compared with observed values in the Solar wind and Interstellar medium.
